

LCM-40 IoT Series

Features

- Constant Current mode output with multiple levels selectable by dip switch
- · Flicker free design
- · Plastic housing with class II design
- Temperature compensation function by external NTC
- · Functions: Bluetooth low energy mesh Synchronization up to 10 units
- · 3 years warranty

Applications

- LED indoor lighting
- LED office lighting
- LED panel lighting
- · LED commercial lighting
- Intelligent lighting control

Description

LCM-40 IoT series is a 40W AC/DC constant current mode output LED driver featuring the multiple levels selectable by dip switch and integration with Bluetooth control solution. LCM-40 IoT operates from 180~295VAC and offers different current levels ranging between 350mA and 1050mA. Thanks to the high efficiency up to 90%, with the fanless design, the entire series is able to operate for -20°C ~+90°C case temperature under free air convection. In addition, LCM-40 IoT is designed with freely assignable input and synchronization function so as to provide the optimal design flexibility for LED lighting system and upgrade lighting to be an intelligent lighting system.

NOTE	 All parameters NOT specially mentioned are measured at 230VAC input, rated current and 25℃ of ambient temperature. De-rating may be needed under low input voltages. Please refer to "STATIC CHARACTERISTIC" sections for details. Length of set up time is measured at first cold start. Turning ON/OFF the driver may lead to increase of the set up time. Efficiency is measured at 500mA/80V output set by DIP switch. Current ripple is measured 50%~100% of maximum voltage under rated power delivery. The driver is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again. (as available on https://www.meanwell.com//Upload/PDF/EMI_statement_en.pdf) The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500f) The standby power consumption does not need to meet ErP due to the integrated wireless transmitter which is working all the time. The dimming memory function needs at least 5 seconds to complete. The matching mode of TY1 type is on-off-on-off-on by AC or DC power. To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently connected to the mains. ■ DIMMING OPERATION

★Bluetooth control

 To be used through APP available on Apple Store and Google Play Store for iOS and Android. Search: BLE with Casambi/TY1 with Smart Life/SVA with Silvair Example:

The APP for BLE type is "Casambi" The APP for TY1 type is "Smart Life" The APP for SVA type is "Silvair"

■ OFFICIAL WEBSITE AND ECOSYSTEM INFORMATION

CASAMBI

The real time Bluetooth IC temperature is shown in the APP. In case it reaches above 72 °C (equivalent to Tc 85°C), the driver will be turn off to provide a protection. In case the units is cooled down, it can be manually turn ON and back to normal operation again.

NOTE: 1.This software temperature protection is an extra independent function from driver its own hardware over temperature protection(when it is enabled, it needs re-AC power on to recover).

2.In general the software temperature protection is triggered before the hardware one when in over temperature.

■ PUSH DIMMING FUNCTION

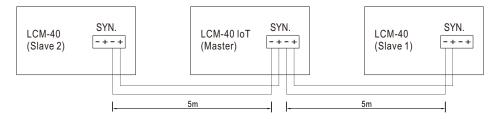

★Freely assignable (push) input(Push dimming function only for BLE)

• The LCM BLE series also has one freely assignable AC mains (push) input. As with a CASAMBI sensor module, control pulses can be defined here (e.g. "controls a luminaire"; "controls an element"; "controls a group"; "controls scenes"; "controls all luminaires"; "change scenes"). See the reference connection figure in the above.

■ SYNCHRONIZATION OPERATION

- Synchronization up to 10 drivers (1 master + 9 slaves)
- Dimming operating range: 10%~100%
- Sync cable length : < 5mSync cable type : Flat cable
- Sync cable cross section area : 22 24 AWG (0.2~0.3mm²)

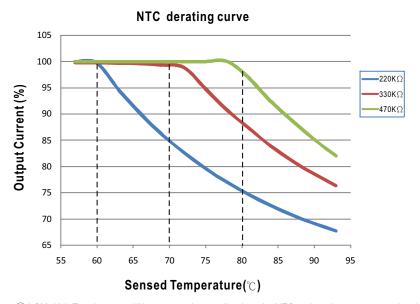

- NOTE: 1. Please make sure all units are set to 100% dimming setting (factory default) before synchronizing.
 - 2. Min. Dimming operating range depends on dimmer setting.

LCM-40 IoT Series

■ TEMPERATURE COMPENSATION OPERATION

LCM-40 IoT series have the built-in temperature compensation function; by connecting a temperature sensor (NTC resistor) between the +NTC/-NTC terminal of LCM-40 IoT series and the detecting point on the lighting system or the surrounding environment, output current of LCM-40 IoT could be correspondingly changed, based on the sensed temperature, to ensure the long life of LED.

- © LCM-40 IoT series can still be operated normally when the NTC resistor is not connected and the value of output current will be the current level selected through the DIP switch.

NTC resistance	Output Current		
220K	< 60°C, 100% of the rated current (corresponds to the setting current level) > 60°C, output current begins to reduce, please refer to the curve for details.		
330K	<70 $^{\circ}$ C, 100% of the rated current (corresponds to the setting current level) >70 $^{\circ}$ C, output current begins to reduce, please refer to the curve for details.		
470K	< 80° C, 100% of the rated current (corresponds to the setting current level) > 80° C, output current begins to reduce, please refer to the curve for details.		

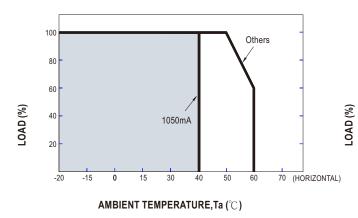

Notes: 1. MEAN WELL does not offer the NTC resistor and all the data above are measured by using THINKING TTC03 series.

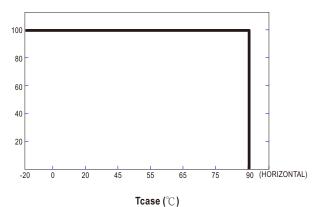

- 2. If other brands of NTC resistor is applied, please check the temperature curve first.
- O Dimming and synchronization function of the driver will be invalid when the "temperature compensation" function is in use.
